2     background-color:lightblue;  
3 }  
4  
5 ~ .ui.table thead th {  
6     background-color:navy;  
7     color:white;  
8 }  
9  
10
```

Add your own CSS styles

- To target elements that use SemanticUI classes, use the class names in your CSS file.

- For example, this CSS:

```
5  .ui.table thead th {  
6      background-color:navy;  
7      color:white;  
8  }
```

- Will target these th cells:

```
<table class="ui fixed table">  
  <thead>  
    <tr>  
      <th>Song</th>  
      <th>Artist</th>  
      <th></th>  
    </tr>  
  </thead>
```

Link to styled-playlist repository

- Import from GitHub: rbirney/styled-playlist

The screenshot shows the Glitch.com editor interface for a project named 'rb-styled-playlist'. The browser address bar displays the URL: `https://glitch.com/edit/#!/rb-styled-playlist?path=views/layouts/main.hbs:18:3`. The left sidebar shows a file explorer with a tree structure including `assets`, `controllers`, `models`, `public`, `utils`, and `views`. The main editor area displays the content of `views/layouts/main.hbs`, which is an HTML template with a head section containing meta tags and links, and a body section containing a script tag for `client.js`. A 'Git, Import, Export' menu is open, showing options to 'Read' or 'Write' the repository, with a URL `https://api.glitch.com/rb-s` and a 'copy' button. Below this, there are buttons for 'Import from GitHub' and 'Export to GitHub'. A dialog box titled 'glitch.com says' is overlaid on the editor, providing instructions on how to import from an existing GitHub repository. The dialog box contains the text: 'Import from an existing GitHub repository - please note that this will overwrite your current project.' and 'Enter the GitHub username, repository name, and optionally a relative path to a specific folder to import using the following format: username/repository:path.' The input field in the dialog box contains the text `rbirney/styled-playlist`. The dialog box has 'OK' and 'Cancel' buttons.

glitch.com says

Import from an existing GitHub repository - please note that this will overwrite your current project.

Enter the GitHub username, repository name, and optionally a relative path to a specific folder to import using the following format: username/repository:path.

rbirney/styled-playlist
